## Flexible, scalable data architecture

### MICROSOFT INTELLIGENT PLATFORM

- .GITHUB
- POWER APPS.
- AZURE SQL
- AZURE SYNAPSE ANALYTICS
- POWER BI

### Automate Repetitive Tasks

Using cloud flows Power Automate will extract customer data from emails and carrier landing page. Customer data will then be uploaded to Azure data lake house.

### Data Integration

Azure Synapse Analytics creates a workspace where data will be combined from disparate resources. Python and SQL will be used to cleanse and curate data within the data lake for a unified view that is more accessible and easier to analyze.

### Data Visualization

Connecting Power BI to SQL serverless endpoint, Power BI is the interface used to generate reports, trends, and actionable insights from customer transactional data.
